1. First we need to find the video in Films on Demand and look for the embed code. Right under the video should be a link Share. Click it and a window opens up below the video displaying more options. Click Embed Code. Highlight and copy the code titled ‘Embed Code (Best for LMS)’.

2. Next open your course in Blackboard. Navigate to where you want to place the video and click Build Content. Then choose Item as your item type.

   In the Text section of the new page a tool bar appears. Click on the HTML icon in the third row.

3. After clicking HTML paste the embed code in the HTML window that opens. Click Update in the bottom right corner and then click Submit on the Create Item page.

   If students access this video off-campus they will be prompted to login when trying to access the video as they would on the library website.
