Blackboard TIP SHEET: Linking to VAST Videos

1. The VAST embed link does not currently work in Blackboard so we need to use the permalink to view the video on the VAST site. First we need to find the video in VAST and look for the embed code link below the video. Click the embed link.

2. A window will open offering you an embed code and a permalink code. Copy thepermalink code.

3. Next open your course in Blackboard. Navigate to where you want to place the video and click Build Content and choose Web Link as your content type.

Enter a name for the video and the URL for the permalink. Click Submit.

If students access this video off campus they will be prompted to login when trying to access the video as they would on the library website.
